"Identification of a novel Drosophila melanogaster heat-shock gene,
"Identification of a novel Drosophila melanogaster heat-shock gene,
"Identification of a novel Drosophila melanogaster heat-shock gene,
"Identification of a novel Drosophila melanogaster heat-shock gene II: 1: 163-170(1996).

-! SUBCELLULAR LOCATION: CYTOPLASMIC (POTENTIAL).
-! TSUE SEPECIFICITY IN EXPRESSION UP TO STAGE II:
- NATH NO SIGN OF TISSUE SPECIFICITY IN EXPRESSION UP TO STAGE II:
- DEVELOPMENTAL STAGE: DETECTED AT ALL DEVELOPMENTAL STAGES. THE
EXTREMELY HIGH LEVEL OF TRANSCRIPTION DETECTED IN THE EARLY EMBRYO
AND IN ADULTS IS CAUSED BY MATERNAL MESSAGE.
-!- INDUCTION: BY HEAT SHOCK.
-!- SIMILARITY: CONTAINS 6 WD REPEATS (TRP-ASP DOMAINS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TRACHEATA; HEXAPODA; INSECTA;

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

```
Atrial peptide analogues - are diuretics and hypotensives.
Atrial peptide analogues - are diuretics and hypotensives.

Ala at the 3 position is D-Ala. Tyr22 has an NH2 group attached.

The peptide increases the cyclic GMP produced in assayed cells at considerable greater levels than Atriopeptin III and alpha-hANP,

See also P81568-P81572.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polypeptide cod. - useful as natriuretic, diuretic and/or vasodilator in mammals
Disclosure, Column 52; 45pp; English.
The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluic volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       [Arg129][D-Ala132][D-Ser148]haNVP(130-145).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Examples: Page 23, 35pp; Japanese.

This represents a human alpha atrial natriuretic peptide sequence and the invention provides a composition for treating cardiac diseases associated with cardiac hypertrophy. The composition comprises an artive ingredient capable of binding to the peptide receptor of GC-A and promoting production of cGMP. The drug composition may be used clinically to treat cardiac diseases caused by cardiac hypertrophy, including chronic heart failure, ischaemic cardiac diseases and cardiac hypertrophy and teachive substance can bind to the natriuretic peptide receptor of GC-A and promote production of GGMP, effectively preventing cardiac hypertrophy and leading to improvement of the pulmonary blood circulation. The substance does not affect haemodynamic properties,
                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-0CT-1998 (first entry)
Alpha human atrial natriuretic peptide (alpha-hANP) 2 (residues 7-28).
ANP: atrial natriuretic peptide: cardiac disease; cardiac hypertrophy; chronic heart failure: ischaemic cardiac disease; arrhythmia; cGMP: pulmonary blood circulation; haemodynamic property.
that contain unusual amino acid (non-native type) derivs. would probably exhibit resistance to proteases in the living body (in blood and on the surface of cells) upon admin. In vivo. Therefore, those derivs. even if they have a lower cyclic GMP producing activity than CNP-22 or alpha-hANP, would be characterised by a longer blood half-life than CNP analogs free from unusual amino acids, and, from this viewpoint, too, those derivs. are anticipated to have industrial
                                                                                                                                                                      Cyclic GMP producing activity for CNP analog (26) is 255% increase for 1 microm, compared to 100% for alpha-hANP and 621% for CNP-22 (specific activity as compared to the activity of 1 microm alpha-hANP (2000 fmol/400000 cells), with max. activity being equiv. to the Sequence 22 AA;
                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3

Disclosure; Column 51; 45pp; English.
The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; pre-pro; atrial natriuretic/vasodilator peptide; ANVP; rat;

The sequences given in R36937-78 are atrial natriuretic/vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also R40387-749.

vasodilator in mammals
Disclosure; Column 11, 45pp; English.
The sequences given in R36937-78 are atrial natriuretic/vasodilator
peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation
of filld volume and blood pressure in host organisms. These ANVP
fragments may be produced by solid-phase techniques. See also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Column 50; 45pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptide cpd. - useful as natriuretic, diuretic and/or vasodilator in mammals
Disclosure; Column 50: 45pp; English.
The sequences given in R4038+7.
These squences given in R4038+7.
These for regulation of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                             Gaps
New synthetic natriuretic peptide(s) - contg. 23 amino acid(s) and having eg diuretic, vaso-relaxant and antihypertensive activities.
                                                 Claim 5: Page 16: 16pp: English.

The peptide shows dissociation of diuretic and natriuretic effects from undesirable vasorelaxant effects on the heart rate, and duration of action is longer than for known natriuretic peptides. It is prepd. by solid phase synthesis. The C-terminal bea an OH or NH2 yp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; pre-pro; atrial natriuretic/vasodilator peptide; ANVP; rat; regulation; fluid volume; blood pressure.

vasodilator in mammals
Disclosure; Column 54; 45pp; English.
The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See also R36937-78
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Diuretic compsn. contg. atrial peptide -
in from for nasal admin. pref. in aq. soln.
Claim 1; Page 8; 10pp; English.
Derivatives of the diuretic peptide may have one or both C-terminal
residues and up to four N-terminal residues absent.
Sequence 24 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              [Ser136]JANVP(127-151).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New attial natriuretic factor analogues - useful as vasodilators, natriuretics, diuretics, immuno-modulators, etc.
Example: Page 15, 24pp; German.
P93041,P94848-P94853; P93098-P93100 are examples of the generic formula for peptides of the invention. They have diuretic, natriuretic and vasodilatory activity, and also immunomodulatory activity. They may also be used to treat renal insufficiency and to protect the kidneys against renal toxins, e.g. cyclosporin during kidney transplantation, and for treating glaucoma and/or reducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alpha-hANP peptide analogues -
are hypotensives and natriuretics.
Claim 1, page 32; 33pp; English.
Peptides can be used as a therapeutic drug for hypertension, a diuretic, for cardiac and cerebral circulatory diseases and as muscle relaxant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                              05-DEC-1990 (first entry)
Alpha-human Atrial Natriuretic Peptide (hANP) analogue #3.
alpha-human Atrial Natriuretic Peptide analogue;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Indels
